EDUCATION

Bachelor of Technology (B.Tech), Maharaja Surajmal Institute of Technology 2024 – 2028
Electronics and Communication Engineering **CGPA: 9.35/10.0**

TECHNICAL SKILLS

Programming: C++, JavaScript, TypeScript, Python, SQL, HTML5, CSS3
Frameworks/Libraries: React.js, React Native, Node.js, Express.js, FastAPI, Tailwind CSS, Flask
Databases: PostgreSQL, MongoDB, Firebase, PostGIS
Tools/Platforms: Git, GitHub, Docker, Google Cloud Platform (GCP), Postman, Vite
Core Concepts: Data Structures & Algorithms, System Design, REST APIs, CI/CD, OOP

EXPERIENCE

Software Developer Intern Dec 2025 – May 2026
SuPrazo Technologies

- Revamped the production website using React.js and Tailwind CSS, improving responsiveness and increasing average session duration by 15%.
- Optimized backend services in Node.js by refactoring legacy workflows and improving API efficiency, reducing response time by 30% under high concurrency.
- Architected and developed a corporate carpooling mobile application from scratch, utilizing React Native for the frontend and Node.js with PostgreSQL for the backend, deploying scalable infrastructure on Google Cloud.

PROJECTS

InsuraAI Link

- Engineered an AI-powered FinTech pipeline using Node.js and Tesseract.js (OCR) to extract key fields from unstructured insurance documents with 95% accuracy.
- Architected a scalable backend with Express.js, MongoDB, and Redis, implementing node-cron for automated policy lifecycle tracking and rate-limiting for API security.

SkyShield Link

- Built a cloud-native spatial data platform using Flask, PostgreSQL, and PostGIS, integrating TensorFlow/PyTorch models to forecast PM2.5 levels 48-72 hours in advance. Currently focused on the Delhi-NCR region and designed to scale later.
- Developed an interactive React.js and Leaflet.js dashboard to visualize real-time pollution hotspots and deliver personalized health risk assessments utilizing ISRO and CPCB data.

OSHub Link

- Developed a full-stack open-source bounty platform using React.js, TypeScript, and Firebase, integrating the GitHub API to automate issue syncing and pull request tracking.
- Designed a responsive, animated UI utilizing Tailwind CSS, Radix UI, and GSAP, significantly optimizing frontend build performance and load times with Vite.

ACHIEVEMENTS

- **Open Source Contributor:** Contributed to Gumboard (Antiwork) and Oppia, building modular features and improving performance for large-scale platforms.
- **HackHeist 2025 Finalist:** Built a functional prototype under strict timelines among 70+ teams.
- **Codeforces Pupil (Max Rating 1361):** Strong problem-solving skills in data structures and algorithms.
